CYBERSECURITY HANDS-ON PROJECTS

- Established a Microsoft Sentinel workspace within an Azure environment, integrating various data connectors to ingest security logs from Azure services, on-premises systems, and third-party security solutions.
- Implemented content hub solutions tailored to specific use cases, enhancing threat detection and compliance monitoring capabilities within the Sentinel workspace.
- Developed and customized analytics rules using Kusto Query Language (KQL) to monitor security events, generate alerts, and automate incident response within the Azure environment.
- Created and deployed automation playbooks using Azure Logic Apps, streamlining the response to security incidents by automating workflows such as alert notifications and incident management.
